

Pallet Handling Systems - Pallet Dispensers

Brillopak BK750 Series floor standing Pallet Dispensers

Summary

Brillopak pallet dispensers are made of the highest quality components and are designed for 24/7 heavy usage. These dispensers are used by system integrators around the world.

The BK 750 can both neatly stack individually-presented pallets and dispense them individually at floor level from a stack.

The system has visual load alarm and status indicators, integral stack guides to ensure square and stable loads, interlocked access doors and strong safety screen protection for safe system operation. In addition, floor-level photo eye security helps to prevent accidents or dropped stacks.

Easily adjustable multi-position lifting pins ensure that one machine to fit all normal pallet shapes, sizes and clearances. Control options include simple levers, single-touch button control and fully automated. The machine is designed and manufactured in accordance with CE specification.

Features

- Places pallet individually. Can handle two-way, four-way, Euro, block, winged and stringer pallets.
- Normal lifting load capacity of 12 pallets, increasing to a maximum of 500 kg.
- Suitable for pallets up to 1200mm x 1200mm.
- Dimensions height = 2m (12 pallets), 3.1m (20 pallets), width = 1.8m, depth = 1.4m.
- Guard with interlocks and photoelectric beams ensure safe operation of system.
- Option available with gates.

WHY USE THIS MACHINE?

- Eliminates manual handling thereby
 - Reducing the likelihood of injury
 - Compensation claims, stoppage time and pallet damage.
 - Increased productivity.
- 24 hours a day reliability and long life.
- Heavy duty yet compact design.
- Completely electrically-driven so compressed air **NOT** required.

Compact packing and palletising systems
